Joint Symposium on Rheology

March 2-4, 2021

BASF, Ludwigshafen, Germany

This symposium will be held as a merger of the annual meetings of the DGK, DRG and ProcessNet Subject Division Rheology.

The symposium targets the rheological properties of complex fluids in all their aspects, be it colloidal dispersions, polymer solutions and melts, filled systems or life science fluids. The objective of this symposium is to present novel results in the fields of theory and simulations, experiments and applications.

Contributions from both academia and industry are welcome in order to touch flow phenomena of a wide variety of complex fluids. In particular young rheologists are encouraged to present their work and share their findings with the rheological community.

There will be no parallel sessions for neither the oral presentations nor the intended poster session. Ample time will be provided for discussions. The conference language will be German or English, while slides and posters should be prepared in English.

Manufacturers and suppliers of rheological instruments will have the opportunity to present their range of products.
